

2024 Holiday Amaryllis Bulbs Under the Pecan Tree

THE Holiday “MUST HAVE!”

Our Giant Amaryllis Bulbs make the perfect gift for literally everyone! And these “no planting, no watering” bulbs are also popular for decorating... on mantles, nestled in seasonal greenery, placed atop candle pillars, or in clusters for center pieces. Blooming for months, it’s the gift that keeps giving!

About the Bulbs... Our bulbs are all grown by one grower in the coastal desert valley of the Andean foothills. Once imported by their partner in the USA, Let ‘Em Bloom, most are then hand-dipped in a special wax from Holland that is specifically formulated to be flexible as bulbs change shapes and shrink as they bloom. These giant bulbs typically produce multiple blooming stalks; each stalk has 4-8 large beautiful blooms. (The size of bulb, the size of the blooms and the number of blooms will depend on the variety and the conditions during the growing period.) **The bulbs will bloom for months**, and with proper care, will bloom annually in your yard or a pot. Don’t ever throw them away!

No Green Thumb Needed... These bulbs are *cultivated* to bloom with no planting and no watering. The “easy-care” nature of these bulbs makes them the perfect gift to brighten hospital rooms, nursing homes, assisted living, memory care, and offices!

When can I buy bulbs... Bulbs will start arriving the last week of October and will arrive throughout November and early December. We are usually sold out by Dec 8th. **Bulbs cannot be placed on hold.** Call 678-694-8704 to join the *Amaryllis Bulb Bulletin* email list for first notice when each shipment arrives.

Bulb Reservation for 10 or more... Reserve bulbs so you’ll have exactly what you need for gift-giving and decorating. New in 2024: To reserve bulbs, you’ll need to reserve **10 or more bulbs of the same variety/ finish**. If you want multiple varieties/finishes, you’ll need to reserve 10 of each.

How to Reserve... Complete and return the Bulb Reservation Form or call 678-694-8704.

Pick Up Notice... Bulbs arrive in phases. If you have selected multiple types, they may arrive on different days.

We will call you when your reserved bulbs arrive.

You must pick up your reserved bulbs within ONE WEEK of the call. We simply don’t have space to store the reserved bulbs.

Yes, you can send someone else to pay for and pick up your bulbs. Just let Amanda know at 678-694.8704.

Failure to Pick Up Bulbs... Bulbs that aren't picked up within ONE WEEK will be returned to the sales floor. Please call with extenuating situations.

Gift Bag... We provide paper gift bags for the bulbs you are gifting; the bulbs will continue to grow in the bag until you are ready to give them away.

First Blooms... Once you see any greenery peeking out of the bulb's "neck," then you can expect the first open blooms in about 4-6 weeks! If you purchase a bulb with no green showing, it may be 6-9 weeks, but you can speed it along by placing it a warm spot. Half the fun is watching from no green to full bloom!

Blooming Cycle... The bulb blooming cycle is the period of time from when the first bloom opens until the last bloom (on the last stalk) opens. Our bulbs typically have a minimum of two blooming stalks, but more likely, they'll have three or even four. Each stalk will then have multiple blooms. **The time from when the first bloom on the first stalk opens until the last bloom on the last stalk opens is typically 8-12 weeks.**

Avoid putting bulbs right next to windows. If they get too cold at night, it takes 12 hours or them to recover. They will think it's too cold to bloom. The warmer room, the taller the stalks and the faster the blooms will open.

Room Temperature will Impact Growth... Bulbs will sprout and bloom more quickly in warmer rooms with an ambient temp above 70 degrees Fahrenheit.

Bulb Care... As the blooms wilt, pinch them off. Once all blooms on the stalk have wilted, cut that stalk down to the base, being careful not to cut other stalks or leaves. Repeat throughout the blooming cycle. (The blooming cycle is -- at minimum -- two months.)

NEVER add water to the bulb. Adding water to a waxed bulb may cause the bulb to mold and preventing growth.

Propping or Turning... As the bulb blooms, you may need to provide support for the bulb to be steady. If the stalk is leaning toward the light source, then rotate the bulb to promote straight growth.

The Gift that Keeps Giving: Once the blooming is done and no more stalks grow (wait at least 3 months to be sure), cut any wax and peel off the moss. Plant the now-shrunken bulb in a pot or in the ground. Let the leaves grow tall for "re-charging."

DON'T THROW BULBS AWAY! THEY ARE STILL ALIVE!

Bulbs make the perfect gift for...

- Mom
- Daughter
- Family
- In-Laws
- Homebound
- Friend
- Caregiver
- Teacher
- Hairstylist
- Neighbor
- Hostess
- Co-worker
- Group Leader
- Book Club
- Team Captain
- Those in nursing homes, assisted living or Memory Care facilities

This is one Picasso bulb with two active blooming stalks. Each stalk has multiple blooms & more about to open.

The 2024 Amaryllis Bulbs

Bulb A:
Blooms: Red
Wax: White
w/Gold Splatter

Bulb B:
Blooms: Red
Spanish Moss

Bulb C:
Blooms: White
Spanish Moss

Blooms: White
Wax: Silver

Gallery – The finish (waxed or in Spanish Moss) has no impact on blooms

Amanda's White and Picasso bulbs. This picture was taken late November '23

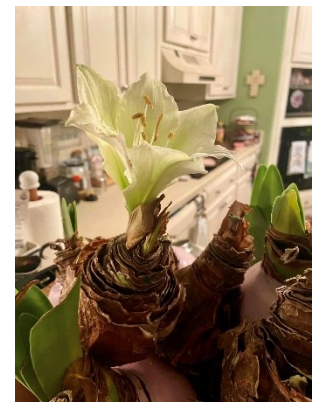

This picture was taken in Mid-December '23

This bulb had a short first stalk. Following stalks were tall

This is the bulb's 4th Stalk of blooms in Feb '24. (1st bloom on 1st stalk was in Dec '23)

'23 White Candle
LAST STALK bloomed in May '24 – 5 months after the first bloom in Dec '23. (It's one of the bulbs in the bowl pictured top row)

Christmas '22 bulb; planted in '23 after all stalks finished; blooming in pot late May '24

Christmas '22 bulb; planted in a pot and left on patio in hot Florida. Just leaves in '23, but beautiful blooms in May '24

Picasso bulbs in Silver Splatter Wax. Multiple stalks per bulb; multiple blooms per stalk
